

Quiz, 28 February 2007–Rates

Lawns-R-Us (Problem 5 on the Homework for Ratio, Rates, and Proportions) is expanding its offering of fertilizer products. Their big money maker is Greener Lawn which is applied at a rate of 2 pounds for every 100 square feet. In addition to their standard Greener Lawn fertilizer they have numerous products. The other products seem to have different application rates with every new shipment.

For this quiz, you are to create a spreadsheet that allows a clerk at Lawns-R-Us to type in the application rate (in pounds per 100 square feet) and the square footage of the customer's lawn (for example, 2500). The spreadsheet should automatically calculate how many pounds of fertilizer the customer needs.

Once you have created such a spreadsheet, save it in the quiz folder located inside of your math1930-TurnIn folder. Call your spreadsheet *green*.
